**Subject:** [PATCH 0/7] SUNRPC: register services with per-net rpcbind  
**Posted by** Stanislav Kinsbursky on Thu, 15 Dec 2011 16:01:20 GMT  
[View Forum Message](#) <> [Reply to Message](#)

This patch set makes service registered with per-net rpcbind and required for making Lockd and NFSd services able to handle requests from and to different network namespaces.

The following series consists of:

---

Stanislav Kinsbursky (7):

SUNRPC: create rpcbind client in passed network namespace context  
SUNRPC: register rpcbind programs in passed network namespaces context  
SUNRPC: use proper network namespace in rpcbind RPCBPROC\_GETADDR procedure  
SUNRPC: parametrize local rpcbind clients creation with net ns  
SUNRPC: pass network namespace to service registering routines  
SUNRPC: register service on creation in current network namespace  
SUNRPC: unregister service on creation in current network namespace

**Subject:** [PATCH 5/7] SUNRPC: pass network namespace to service registering routines  
**Posted by** Stanislav Kinsbursky on Thu, 15 Dec 2011 16:01:22 GMT  
[View Forum Message](#) <> [Reply to Message](#)

Lockd and NFSd services will handle requests from and to many network namespaces. And thus have to be registered and unregistered per network namespace.

Signed-off-by: Stanislav Kinsbursky <skinsbursky@parallels.com>

Subject: [PATCH 3/7] SUNRPC: use proper network namespace in rpcbind  
RPCBPROC\_GETADDR procedure

Posted by [Stanislav Kinsbursky](#) on Thu, 15 Dec 2011 16:01:24 GMT

[View Forum Message](#) <> [Reply to Message](#)

---

Pass request socket network namespace to rpc\_uaddr2sockaddr() instead of  
hardcoded init\_net, when decoding address in RPCBPROC\_GETADDR procedure.

Signed-off-by: Stanislav Kinsbursky <[skinsbursky@parallels.com](mailto:skinsbursky@parallels.com)>

Subject: [PATCH 7/7] SUNRPC: unregister service on creation in current network namespace

Posted by [Stanislav Kinsbursky](#) on Thu, 15 Dec 2011 16:03:00 GMT

[View Forum Message](#) <> [Reply to Message](#)

On service shutdown we can be sure, that no more users of it left except current. Thus it looks like using current network namespace context is safe in this case.

Subject: [PATCH 6/7] SUNRPC: register service on creation in current network namespace

Posted by [Stanislav Kinsbursky](#) on Thu, 15 Dec 2011 16:03:01 GMT

[View Forum Message](#) <> [Reply to Message](#)

---

Service, using rpcbind (Lockd, NFSd) are starting from userspace call and thus we can use current network namespace.

There could be a problem with NFSd service, because it's creation can be called through NFSd fs from different network namespace. But this is a part of "NFSd per net ns" task and will be fixed in future.
