Subject: [PATCH 0/7] SUNRPC: register services with per-net rpcbind
Posted by Stanislav Kinsbursky on Thu, 15 Dec 2011 16:01:20 GMT
View Forum Message <> Reply to Message

This patch set makes service registered with per-net rpcbind and required for making Lockd and NFSd services able to handle requests from and to different network namespaces.

The following series consists of:

Stanislav Kinsbursky (7):
      SUNRPC: create rpcbind client in passed network namespace context
      SUNRPC: register rpcbind programs in passed network namespase context
      SUNRPC: use proper network namespace in rpcbind RPCBPROC_GETADDR procedure
      SUNRPC: parametrize local rpcbind clients creation with net ns
      SUNRPC: pass network namespace to service registering routines
      SUNRPC: register service on creation in current network namespace
      SUNRPC: unregister service on creation in current network namespace

Subject: [PATCH 5/7] SUNRPC: pass network namespace to service registering routines
Posted by Stanislav Kinsbursky on Thu, 15 Dec 2011 16:01:22 GMT
View Forum Message <> Reply to Message

Lockd and NFSd services will handle requests from and to many network nsamespaces. And thus have to be registered and unregistered per network namespace.

Signed-off-by: Stanislav Kinsbursky <skinsbursky@parallels.com>

Subject: [PATCH 3/7] SUNRPC: use proper network namespace in rpcbind RPCBPROC_GETADDR procedure
Posted by Stanislav Kinsbursky on Thu, 15 Dec 2011 16:01:24 GMT
View Forum Message <> Reply to Message

Pass request socket network namespace to rpc_uaddr2sockaddr() instead of
hardcoded init_net, when decoding address in RPCBPROC_GETADDR procedure.

Subject: [PATCH 7/7] SUNRPC: unregister service on creation in current network namespace

Posted by Stanislav Kinsbursky on Thu, 15 Dec 2011 16:03:00 GMT

View Forum Message <> Reply to Message

On service shutdown we can be sure, that no more users of it left except current. Thus it looks like using current network namespace context is safe in this case.

Subject: [PATCH 6/7] SUNRPC: register service on creation in current network namespace
Posted by Stanislav Kinsbursky on Thu, 15 Dec 2011 16:03:01 GMT
View Forum Message <> Reply to Message

Service, using rpcbind (Lockd, NFSd) are starting from userspace call and thus
we can use current network namespace.
There could be a problem with NFSd service, because it's creation can be called
through NFSd fs from different network namespace. But this is a part of "NFSd
per net ns" task and will be fixed in future.
