Hi,

Does anybody on this list is using virt-manager and openvz?

I am trying on debian, ubuntu, kubuntu and gentoo, none of them displays the openvz option.

Any idea?

Best,

"In July 2005, after several failed attempts to legalise software patents in Europe, the patent establishment changed its strategy. Instead of explicitly seeking to sanction the patentability of software, they are now seeking to create a central European patent court, which would establish and enforce patentability rules in their favor, without any possibility of correction by competing courts or democratically elected legislators."

I'm not using it but I seem to remember that virt-manager had a compile option to enable openvz. Assuming it still has, was it enabled?

If it was, than I have no idea why isn't it showing...

Regards
