I am running CentOS 6.2 with OpenVZ 2.6.32-042stab036.1 on x86_64 and trying to update to the latest build `vzkernel-2.6.32-042stab046.1.x86_64.rpm`

The `vzkernel-firmware` is giving me a conflict with the current version:
file `/lib/firmware/isci/isci_firmware.bin` from install of
`vzkernel-firmware-2.6.32-042stab046.1.noarch` conflicts with file from package
`vzkernel-firmware-2.6.32-042stab036.1.noarch`
file `/usr/share/doc/vzkernel-firmware-2.6.32/WHENCE` from install of
`vzkernel-firmware-2.6.32-042stab046.1.noarch` conflicts with file from package
`vzkernel-firmware-2.6.32-042stab036.1.noarch`

Has anybody else seen this and what I am doing wrong? I have updated to the latest version for the last four months without issue but now it is not happy.

- 1) Turn off `openvz` repo (`enabled=0`)
 - 2) Remove pkg: `yum remove vzkernel-firmware-2.6.32-042stab044.11.noarch`
 - 3) Update system: `yum update -y`
 - 4) Turn on repo `openvz`
 - 5) Update system again
 - 6) Enjoy
-

You can force yum to exclude packages on command line or in config file.

`/etc/yum.conf`

and add:

exclude = kernel*

What I did was exclude on the command line during the update.

yum --exclude=kernel* update

Quote:1) Turn off openvz repo (enabled=0)
2) Remove pkg: yum remove vzkernel-firmware-2.6.32-042stab044.11.noarch
3) Update system: yum update -y
4) Turn on repo openvz
5) Update system again
6) Enjoy Smile
Works perfect !
Thank you.
