Hi, anybody can help me with attached errors?

I'm using 2.6.32-042stab044.11

Thanks!

Hello,

Have you found a solution for this issue?

We are having this issue on some servers and already looking for a way to downgrade them back to RHEL5.

Hi,

how we can see in a host, what CT's are from an old RHEL 5 ?

By the moment I want move to solve the issue, but I'm not sure what CT's I need move...

Thanks.

I don't believe this has to do with guest's running RHEL5.

If you downgrade your kernel from RHEL6 to RHEL5 you won't experience this issue anymore.

I am trying to do thtat (RHEL5 kernel on RHEL6 installation) but I am facing some problems.
