Subject: eth0 error fetching interface
Posted by Jcats on Wed, 11 Jan 2012 21:17:29 GMT

Centos 5.7 x64

I had to download a rpm driver for my onboard nic in order to get it to work on the default kernel, "2.6.18-274" however when I installed the openvz kernel '2.6.18-274.7.1.el5.028stab095.1' I am unable to get the nic working again.

Running a simple ifconfig eth0 up gives me:

unknown interface no such device, does this sound like a driver issue still?

I know I am lacking a lot of helpful info but I am unable to copy/paste so hoping you can ask for needed info and Ill get it to you.
