
Subject: [PATCH v5 2/6] SUNRPC: optimize net_ns dereferencing in rpcbind creation calls

Posted by [Stanislav Kinsbursky](#) on Fri, 13 Jan 2012 08:52:18 GMT

[View Forum Message](#) <> [Reply to Message](#)

Static rpcbind creation functions can be parametrized by network namespace pointer, calculated only once, instead of using init_net pointer (or taking it from current when virtualization will be completed) in many places.
