Subject: sync in container

recently we found the trouble that one of the container users applied "sync" inside in the container and then the whole host becomes in high-load status. even blkio cannot suppress the that container's disk I/O rate.

kernel: 2.6.32-042stab044.11

has anyway encountered the same trouble? if so, how to solve? (it is hard to require user not to do "sync" inside in the container.) thanks!
