Host system has 3 NICs, all the same subnet.

eth0 = 10.0.0.100 gw 10.0.0.1

eth1 & eth2 bonded to bond0 = 10.0.0.101 gw 10.0.0.1

Pool of IPs for the containers will be the same subnet as well (if it matters)

I would like to keep eth0 available to host only.

And bond0 available to all the containers.

What would be the optimal configuration?
