Hello,

We are going to downgrade some nodes that are crashing  
([http://bugzilla.openvz.org/show\\_bug.cgi?id=2188](http://bugzilla.openvz.org/show_bug.cgi?id=2188)) to RHEL5.

Would you recommend any easy way? We'd like to keep the host on CentOS 6 but loading RHEL5 kernel.

I tried to install the RHEL5vzkernel with RPM but it asked for mkinitrd. So, I forced but got lot of errors on the next boot.

Thanks.
