
Subject: [PATCH v2] tun: don't hold network namespace by tun sockets
Posted by Stanislav Kinsbursky on Mon, 12 Mar 2012 11:20:19 GMT
[View Forum Message](#) <[Reply to Message](#)

v2: sk_release_kernel() used for socket release. Dummy tun_release() is required for sk_release_kernel() ---> sock_release() ---> sock->ops->release() call.

TUN was designed to destroy it's socket on network namespace shutdown. But this will never happen for persistent device, because it's socket holds network namespace.

This patch removes of holding network namespace by TUN socket and replaces it by creating socket in init_net and then changing it's net it to the desired one. On shutdown socket is moved back to init_net prior to final put.

Signed-off-by: Stanislav Kinsbursky <skinsbursky@parallels.com>

Drop this patch. There will be third version.

Sorry for inconvenience.

--

Best regards,
Stanislav Kinsbursky
