
Subject: impossible to connect to port 3306

Hi

I want to connect to port 3306 from a server to my container.
But it doesn't work.

I can connect to different port with telnet (80,53 ...) but not 3306.

Which iptable rule can I add to open this port ?

3306 is already open in container, so I suppose I have something to add in HN.

Thanks for your help.
