Hello Experts,

I am getting "warning: `vzctl' uses 32-bit capabilities (legacy support in use)" in my /var/log/messages.

I am using x84 architecture server. Also i have installed x84 bit openvz.

Please Help me..

You mean you're using x86, so 32-bit OS?

This is just a warning you're seeing in the logs. Do you have an actual problem, does something fail to work?
