Subject: Hornet Queue (jboss) vs sever resource shortage Posted by Dariush Pietrzak on Thu, 22 Mar 2012 12:08:48 GMT

View Forum Message <> Reply to Message

Hello,

we have encountered a very strange behaviour of HornetQueue, running it inside vz results in:

bash: fork: Cannot allocate memory

or

xmalloc: cannot allocate 4008 bytes (2084864 bytes allocated)

(this is on host node, that has ~20G of free, unused RAM, inside containers the problem is not visible - hornet is limited to ~4G of ram, container is limited to ~16G of ram and 0 vSwap, rest is unlimited)

UBC inside container shows no visible resource usage problem, I'd go as far as to call it frugal - 1600 filedescriptors, very low shm usage, physpages nowhere near limit, and yet, when daemon runs, HN is unable to even accept login from console.

how can I track down what is causing this?

regards, Eyck

Which kernel do you use?

Could you show content of /proc/bc/CTID/resources?

If I understand you don't have ANy failcnts in /proc/ ubc? is that right?

Im using jboss (can say with 'middle load') inside vms and the problems (cannot allocate memory etc.) was beautifully printed in failcnt on /proc/user_bea...

Well, yes and no, I can't do anything on HN,

but I can show you cat /proc/user_beancounters:

(this is from the guest that caused all that resource shortage)

Version: 2.5

uid resource	held	maxheld	barrier	limit	failcnt

(as you can see I tried limiting some of the resources, when it was first noticed, everything was unlimited:unlimited except physpages which is at 16G, and swap which was set to 0.) When the hornetq is stopped inside container, HN returns back to life, but untill then, even things like bash completion fails with:

xmalloc: ../bash/make_cmd.c:100: cannot allocate 519 bytes (2076672 bytes allocated)

regards, Eyck

> xmalloc: ../bash/make_cmd.c:100: cannot allocate 519 bytes (2076672 bytes allocated)

And here's excerpt from top (running on HN):

Mem: 32942724k total, 5930724k used, 27012000k free, 528k buffers Swap: 8388600k total, 0k used, 8388600k free, 1864140k cached

PID USER PR NI VIRT RES SHR S %CPU %MEM TIME+ COMMAND 76750 nn12 20 0 4621m 1.2g 10m S 1 3.7 2:40.11 java

- -Ddata.dir=/var/spool/ss/queue/hot/server0-data -Djnp.port=1099 -Djnp.rmiPort=1098
- -Djnp.host=myhost.cc -Dhornetq.remoting.netty.host=myhost.cc
- -Dhornetq.remoting.netty.port=5445 -Dcom.sun.management.jmxremote
- -Dcom.sun.management.jmxremote.port=6000 -Dcom.sun.management.jmxremote.ssl=false
- -Dcom.sun.management.jmxremote.authenticat 76876 nn12 20 0 4632m 1.0g 10m S 1 3.3 2:15.22 java
- -Ddata.dir=/var/spool/ss/queue/hot/server1-data -Djnp.port=1199 -Djnp.rmiPort=1198
- -Dinp.host=myhost.cc -Dhornetq.remoting.netty.hos

to verify that all that memory really is available, i ran: dd if=/dev/zero of=/dev/null bs=1G (and then 2G, 4G) and as can be seen here, it works:

Mem: 32942724k total, 8034640k used, 24908084k free, 528k buffers Swap: 8388600k total, 0k used, 8388600k free, 1864276k cached

PID USER PR NI VIRT RES SHR S %CPU %MEM TIME+ COMMAND

118477 root 20 0 4107m 2.0g 504 R 100 6.4 0:10.60 dd if=/dev/zero of=/dev/null bs=4G

76750 nn12 20 0 4621m 1.2g 10m S 1 3.7 2:41.35 java -Ddata.dir=/var/spool

but the HN can't allocate anything. I'm baffled. What kind of memory shortage can cause such symptoms?

regards, Eyck

Could you file a bug in https://bugzilla.openvz.org/?

I'd suggest trying to reproduce the case on the latest rhel6-testing kernel (042stab053.3) and then filing a bug.

Filed a bug, reproduced it on 042stab053.3 and also today on 042stab053.5. Noticed few more different things - when I set privvmpages to 12G:16G, I can't start java (hornetq) with -Xmx set to ~7G, and UBC increases failure

count on privvmpages, program fails to start with:

Error occurred during initialization of VM Could not reserve enough space for object heap Could not create the Java virtual machine.

(so there is something here, that accounting at least notices). (when I reduce -Xmx to ~6G, hornetq starts, and then I get 'out of memory' errors on console/HN).

Also, it seems that limiting heap with -Xmx to ~512M makes it possible to run one or two instances with hornetq without ill-effects.

regards, Eyck
