Hello,
 we have encountered a very strange behaviour of HornetQueue, running it
inside vz results in:

 bash: fork: Cannot allocate memory
or
  xmalloc: cannot allocate 4008 bytes (2084864 bytes allocated)

(this is on host node, that has ~20G of free, unused RAM, inside
containers the problem is not visible - hornet is limited to ~4G of ram,
container is limited to ~16G of ram and 0 vSwap, rest is unlimited)

 UBC inside container shows no visible resource usage problem, I'd go as
far as to call it frugal - 1600 filedescriptors, very low shm usage,
physpages nowhere near limit, and yet, when daemon runs, HN is unable to
even accept login from console.

how can I track down what is causing this?

regards, Eyck

Which kernel do you use?
Could you show content of /proc/bc/CTID/resources?

If I understand you don't have ANy failcnts in /proc/ ubc ? is that
right?
Im using jboss (can say with 'middle load') inside vms and the
problems (cannot allocate memory etc.) was beautifully printed in
failcnt on /proc/user_bea...

 Well, yes and no, I can't do anything on HN,
but I can show you cat /proc/user_beancounters:
(this is from the guest that caused all that resource shortage)
Version: 2.5

uid	resource	held	maxheld	barrier	limit	failcnt
178032:	kmemsize	34481819	36954112	17179869184	19327352832	0
	lockedpages	0	0	9223372036854775807	9223372036854775807	0
	privvmpages	3360282	5017649	4194304	4718592	0
	shmpages	5451	5467	9223372036854775807	9223372036854775807	0
	dummy	0	0	0	0	0
	numproc	505	693	9223372036854775807	9223372036854775807	0
	physpages	766009	942952	0	3932160	

0

	held	maxheld	barrier	limit	failcnt

numiptent	10	10	9223372036854775807	9223372036854775807	0

(as you can see I tried limiting some of the resources, when it
was first noticed, everything was unlimited:unlimited
except physpages which is at 16G, and swap which was set to 0.)
 When the hornetq is stopped inside container, HN returns back to life,
but untill then, even things like bash completion fails with:

xmalloc: ../bash/make_cmd.c:100: cannot allocate 519 bytes (2076672 bytes allocated)

> xmalloc: ../bash/make_cmd.c:100: cannot allocate 519 bytes (2076672 bytes allocated)

And here's excerpt from top (running on HN):

Mem: 32942724k total, 5930724k used, 27012000k free,   528k buffers
Swap: 8388600k total,   0k used, 8388600k free, 1864140k cached

```
   PID USER     PR  NI  VIRT  RES  SHR S %CPU %MEM   TIME+  COMMAND
 76750 nn12      20   0 4621m 1.2g  10m S   1  3.7  2:40.11 java
-Ddata.dir=/var/spool/ss/queue/hot/server0-data -Djnp.port=1099 -Djnp.rmiPort=1098
-Djnp.host=myhost.cc -Dhornetq.remoting.netty.host=myhost.cc
-Dhornetq.remoting.netty.port=5445 -Dcom.sun.management.jmxremote
-Dcom.sun.management.jmxremote.port=6000 -Dcom.sun.management.jmxremote.ssl=false
-Dcom.sun.management.jmxremote.authenticat
 76876 nn12      20   0 4632m 1.0g  10m S   1  3.3  2:15.22 java
-Ddata.dir=/var/spool/ss/queue/hot/server1-data -Djnp.port=1199 -Djnp.rmiPort=1198
-Djnp.host=myhost.cc -Dhornetq.remoting.netty.hos
```

to verify that all that memory really is available, i ran:
dd if=/dev/zero of=/dev/null bs=1G
(and then 2G, 4G)
and as can be seen here, it works:

Mem: 32942724k total, 8034640k used, 24908084k free,   528k buffers
Swap: 8388600k total,   0k used, 8388600k free, 1864276k cached

```
   PID USER     PR  NI  VIRT  RES  SHR S %CPU %MEM   TIME+  COMMAND
118477 root      20   0 4107m 2.0g  504 R  100  6.4  0:10.60 dd if=/dev/zero of=/dev/null bs=4G
 76750 nn12      20   0 4621m 1.2g  10m S   1  3.7  2:41.35 java -Ddata.dir=/var/spool
```

 but the HN can't allocate anything. I'm baffled. What kind of memory shortage can cause
such symptoms?

regards, Eyck

Could you file a bug in https://bugzilla.openvz.org/ ?

I'd suggest trying to reproduce the case on the latest rhel6-testing
kernel (042stab053.3) and then filing a bug.

 Filed a bug, reproduced it on 042stab053.3 and also today on 042stab053.5.
Noticed few more different things - when I set privvmpages to 12G:16G, I
can't start java (hornetq) with -Xmx set to ~7G, and UBC increases failure

count on privvmpages, program fails to start with:

Error occurred during initialization of VM
Could not reserve enough space for object heap
Could not create the Java virtual machine.

(so there is something here, that accounting at least notices).
(when I reduce -Xmx to ~6G, hornetq starts, and then I get 'out of memory'
errors on console/HN).
 Also, it seems that limiting heap with -Xmx to ~512M makes it possible to
run one or two instances with hornetq without ill-effects.
