
Subject: [PATCH] Lockd: pass network namespace to creation and destruction routines

Posted by [Stanislav Kinsbursky](#) on Thu, 29 Mar 2012 14:23:06 GMT

[View Forum Message](#) <> [Reply to Message](#)

These routines are called from locks reclaimer() kernel thread. This thread works in "init_net" network context and currently relays on presence on lockd thread and it's per-net resources. Thus lockd_up() and lockd_down() can't use current network context. So let's pass corrent one into them.

This patch has a flaw. Thus will be v2.
Sorry.
