Hi,

Has any one tried to patch and run the unbreakable kernel with openvz which i belive runs on the 3.0 kernel stream and btrfs or would people suggest i stick with the rhel 6 kernel?

Mark

Supporting yet another branch is pretty hard, we'd rather concentrate on ironing out RHEL6 kernel for now. We do plan to port to some 3.x kernel in the future, but x is still undefined. So my recommendation is to stay with RHEL6-based kernel.

What in particular you want to have from btrfs? From our perspective it looks interesting but not quite ready for the prime time (unlike ext4 which is pretty stable as of now).

Kir.

Nothing as yet just asking if anyone was doing so?
