FYI, a possible fix for a bug I was seeing with software RAID on 2.6.26+OpenVZ a while ago, (and reported here at the time) has been highlighted by Ben Hutchings.

The bug is still present in current production kernels (incl RHEL6 etc.). If I was indeed seeing this bug, then other changes between 2.6.26 and 2.6.32 meant that the bug was no longer frequently triggered on my test environment.

I'm posting here in case OpenVZ continues to tickle this bug more frequently than non-OpenVZ installs for some reason - Ben's email with patch is here:

<http://bugs.debian.org/cgi-bin/bugreport.cgi?bug=584881#113>

Cheers,

Tim.
