Hello. I'm wondering if grsec kernel fix you guys are talking about here
<http://wiki.openvz.org/Grsecurity> is still working as of 2.6.18-274.7.1.el5.028stab095.1

Quote from <http://wiki.openvz.org/Grsecurity>

Which means root user can configure TPE inside VE as usual, i.e. via the following /proc files...

```
echo 1 > /proc/sys/kernel/grsecurity/tpe
```

```
-bash: /proc/sys/kernel/grsecurity/tpe: No such file or directory
```

grsecurity folder can not be seen from inside VE.

Any way to enable something in order for this option to work?

Thank you.
