I am about to release vzctl-3.2 (a.k.a. "jetlagged in san francisco")
with some nifty new features and improvements.

Preliminary list of changes can be seen at
* http://wiki.openvz.org/Download/vzctl/3.2/changes
* http://git.openvz.org/?p=vzctl;a=log

I have made a nightly build available at
* http://download.openvz.org/utils/nightlies/vzctl/current/
and I want you to test it and report your results here or to
bugzilla.openvz.org
Note that you need to upgrade ploop and ploop-lib packages to 1.2 before
trying
to install this version (in case of yum it should happen automagically).

Some more info about vzctl nightly builds are available at:
* http://wiki.openvz.org/Download/vzctl/nightly

Regards,
    Kir.

A new build 3.1-69.git.ec1e37a is available, it now works with Fedora 16
containers
(http://git.openvz.org/?p=vzctl;a=commit;h=ec1e37a)

Download is the same. Please test.

A new build 3.1-87.git.5fa6a80 is available, list of additional fixes is:
* vzctl set/start/convert: check for max possible ploop size (#2250)
* vzmigrate: skip vzquota ops for ploop-based CTs (related to #2252)
* vzctl set --ram/--swap and vzctl start: check if kernel is vswap
capable (#2251)
* fixed vzlist eating some columns (bug introduced after 3.1 release)
* Code cleanups:
    * include/*.h: remove non-existent function prototypes
    * remove NULL checks before free()
    * some functions marked as static, moved to there they belong

Full changelog can be seen at
http://git.openvz.org/?p=vzctl;a=commit;h=5fa6a80

This is a final call, I will probably release final 3.2 tomorrow or so.

Please give it a try now.

Hello everybody! and particularly Kir :-)

I have modified vzmigrate to take into account containers with its own
filesystem mounted in /vz/private/$VEID and backed by its own volume,
that, in our case, is on a shared storage infrastructure. I would like
to contribute changes if Kir finds it convenient.

I have developed new version and tested it with vzmigrate version 3.0.29.3.

I have incorporated changes from vzmigrate.3.2.1-1 and vzmigrate.3.3-1
as new versions arise.

I have created an openvz wiki page to explain this subject and how to
use the new features:

 http://wiki.openvz.org/Vzmigrate_filesystem_aware#Links_to_m odified_vzmigrate

Here are links with modified vzmigrate and vzmigrate's patch:
ftp://ftp.uma.es/pub/Linux/openvz

Greetings
