Hi,

How is it possible to install www-client/chromium in a VE with a gentoo host ?

I have an error about Makefile not found :

- * Could not find a Makefile in the kernel source directory.
- * Please ensure that /usr/src/linux points to a complete set of Linux sources
- * Unable to calculate Linux Kernel version for build, attempting to use running version
- * Unable to check for the following kernel config options due
- * to absence of any configured kernel sources or compiled
- * config:
- * - PID_NS - PID_NS is required for sandbox to work
- * - NET_NS - NET_NS is required for sandbox to work
- * You're on your own to make sure they are set if needed.

I tried to mount -o bind /usr/src/linux but it hasn't any Makefile...
