
Subject: HN using swap instead of ram

Hi!

Today I encountered a strange behaviour. My hardware node (Debian 2.6.32-5-opensvz-amd64) with 36Gb of RAM filled up its SWAP while there was enough physical RAM left, it was only using about 12Gb.

Would anyone maybe know what could have caused this?

If any more information is required then please let me know.

Thank you for your help anyway!

Kind Regards,

E. de Wolf
