Subject: No NFS in container after host reboot

Hi

I have a strange problem. I used nfs mount in a openvz container. It worked well until reboot of the host. I can mount nfs shares on the host but not in the container.
I tried to add the nfs feature again
vzctl set 159 --features "nfs:on" --save
an restarted the container. But it still doesn't work:

CT: cat /proc/filesystems
        ext3
nodev   autofs
nodev   sysfs
nodev   proc
nodev   tmpfs
nodev   devpts

Any ideas?

Thanks! Jan D
