Hello!

Please forgive my bad English, I am French.

I am using a little script to replicate OpenVZ containers on a different directory but sometimes, in kernel.log, there are strange messages :

```
kernel: Holy Crap 1 0 12176,1120(imap-login)
kernel: Holy Crap 1 0 4487,291(pdns_server)
kernel: Holy Crap 1 0 100278,14626(imap)
kernel: Holy Crap 1 0 8978,331(opendkim)
kernel: Holy Crap 1 0 8979,332(opendkim)
kernel: Holy Crap 1 0 7185,1420(mysqlld)
kernel: Holy Crap 1 0 4485,289(pdns_server)
kernel: Holy Crap 1 0 8981,334(opendkim)
kernel: Holy Crap 1 0 399921,289(pdns_server)
kernel: Holy Crap 1 0 399924,292(pdns_server)
kernel: Holy Crap 1 0 8693,268(rsyslogd)
kernel: Holy Crap 1 0 8978,331(opendkim)
kernel: Holy Crap 1 0 719575,3799(master)
```

The script is simple (copied from vzmigrate) :

```
1) rsync --archive --delete --delete-excluded --hard-links --numeric-ids --sparse
/var/lib/vz/private/xxx/ /home/backup/vz/xxx/ (first pass)
2) vzctl chkpnt xxx --suspend
3) vzctl chkpnt xxx --dump --dumpfile "xxx.dump"
1) rsync --archive --delete --delete-excluded --hard-links --numeric-ids --sparse
/var/lib/vz/private/xxx/ /home/backup/vz/xxx/ (second pass)
5) vzctl chkpnt xxx --resume
```

I have found the source file where the error come from but I am unable to know if it is a severe error or not.

It is present on line 279 in cpt\_dump.c but after the error a "continue" is called in a infinte loop so I am puzzled...

[git.openvz.org/?p=linux-2.6.32-openvz;a=blob;f=kernel/cpt/cpt\\_dump.c](http://git.openvz.org/?p=linux-2.6.32-openvz;a=blob;f=kernel/cpt/cpt_dump.c)

I am using Proxmox 2.1, everything is up to date.

EDIT : kernel & tools version :

pve-manager: 2.1-1 (pve-manager/2.1/f9b0f63a)  
running kernel: 2.6.32-11-pve  
proxmox-ve-2.6.32: 2.0-66  
pve-kernel-2.6.32-10-pve: 2.6.32-63  
pve-kernel-2.6.32-11-pve: 2.6.32-66  
lvm2: 2.02.95-1pve2  
clvm: 2.02.95-1pve2  
corosync-pve: 1.4.3-1  
openais-pve: 1.1.4-2  
libqb: 0.10.1-2  
redhat-cluster-pve: 3.1.8-3  
resource-agents-pve: 3.9.2-3  
fence-agents-pve: 3.1.7-2  
pve-cluster: 1.0-26  
qemu-server: 2.0-39  
pve-firmware: 1.0-15  
libpve-common-perl: 1.0-27  
libpve-access-control: 1.0-21  
libpve-storage-perl: 2.0-18  
vncterm: 1.0-2  
vzctl: 3.0.30-2pve5  
vzprocps: 2.0.11-2  
vzquota: 3.0.12-3  
pve-qemu-kvm: 1.0-9  
kvm-control-daemon: 1.1-1

Thank you for your help!

Hi,

I've the same problem :

Apr 9 01:19:41 xxxx kernel: Holy Crap 1 0 26466,22969(tlsmgr)

Apr 9 01:19:41 xxxx kernel: Holy Crap 2 0 26466,22969(tlsmgr)

seems to happen at the exact same moment of a vzdump.

Result 1 of my VE is blocked in Uninterruptible state.

root 3863 312351 0.0 10164 408 ? Ds Apr09 10557290:44 vzctl --skiplock chkpnt 100  
--suspend

My version :  
pve-manager: 1.8-18 (pve-manager/1.8/6070)  
running kernel: 2.6.32-4-pve  
pve-kernel-2.6.32-4-pve: 2.6.32-33  
qemu-server: 1.1-30  
pve-firmware: 1.0-11  
libpve-storage-perl: 1.0-17  
vncterm: 0.9-2  
vzctl: 3.0.28-1pve1  
vzdump: 1.2-14  
vzprocps: 2.0.11-2  
vzquota: 3.0.11-1dso1

Did you find a solution and an explanation of this "Holy Crap" ?

Thks

jul

I have the same problem:

May 14 16:51:01 wfsr010 kernel: Holy Crap 1 0 909551,469(apache2)  
May 14 18:17:22 wfsr010 kernel: Holy Crap 1 0 979972,373(mysql)  
May 14 18:22:18 wfsr010 kernel: Holy Crap 1 2 979935,336(mysql)  
May 14 18:23:17 wfsr010 kernel: Holy Crap 1 0 989531,129(sshd)  
May 14 18:23:17 wfsr010 kernel: Holy Crap 1 0 989776,374(mysql)  
May 15 17:19:45 wfsr010 kernel: Holy Crap 1 0 989776,374(mysql)  
May 15 17:54:43 wfsr010 kernel: Holy Crap 1 0 2455,40(init-logger)  
May 15 18:40:50 wfsr010 kernel: Holy Crap 1 0 22862,374(mysql)

I think this problem arises when I try to chkpnt a container.

my kernel:

Linux wfsr010 2.6.32-11-pve #1 SMP Wed Apr 11 07:17:05 CEST 2012 x86\_64 GNU/Linux

my vzctl version:

vzctl version 3.0.30.2-11.git.aefc8ef

I use proxmox 2.1 and I am up to date.

Hello!

\_\_\_jul wrote on Mon, 14 May 2012 05:34Did you find a solution and an explanation of this "Holy Crap" ?

Nope...

I have read the source of cpt\_dump.c but I am unable to understand why the error is triggered.

The patch including this error was posted by Alexey Kuznetsov in August 2006.

[git.openvz.org/?p=linux-2.6.16-openvz;a=commitdiff\\_plain;h=c691647ba91d87e1d79f8eb7cda31d698f782a14](http://git.openvz.org/?p=linux-2.6.16-openvz;a=commitdiff_plain;h=c691647ba91d87e1d79f8eb7cda31d698f782a14)

Cheers.
