Hi again all,

I hit this issue (twice, due to PEBKAC) in trying to configure a
container as an NFS client. I was using the docs here:

http://wiki.openvz.org/NFS_doesn%27t_work

and, being somewhat older, of course knew immediately what "Portmap is
not running on the NFS client" meant, but had forgotten (twice, more
PEBKAC!) that rpcbind is replacing the portmapper, and for newer distros
rpcbind, not portmap, needs to be running. Is it kosher for me to modify
the wiki to say "portmap or rpcbind" on this page?

Thanks,

--keith
