on containers inside 2.6.32-042stab055.10 kernel most of the time %id is 0%, it dosn't make a difrence that load is 0

outside %id %us and %sy values look normal

it seems that machines are getting there share of cpu (openssl speed runs as expected)

```
top - 12:20:00 up 11 days, 9:18, 0 users, load average: 0.00, 0.01, 0.06

even if container is doing absolutely nothing top shows 90% + user utilization, this doesn't seem right

on rhel5 based kernels total cpu utilization numbers reflected the sum of cpu utilization and %idle reflected free cpu

is this reflecting some change in cpu usage reporting inside the containers or is it a bug?

vps config follows

```
CPULIMIT="100"
PHYSPAGES="0:321536"
NUMIPTENT="200"
CPUUNITS="29153"
NOATIME="yes"
CPUS="4"
SWAPPAGES="0"
```

thanks in advance for any answers

thank You for the information,
but on 56.11 idle is still almost all the time 0%

```

Just checked my VPS again and they're fine now. Do you run a custom kernel build or the official releases?

I'm running a custom build kernel config attached,

I have rechecked it and now top is switching from

100%us 0%id to 0%us 100%id

1) [cfg](#), downloaded 279 times

perhaps you should try with an original config
