Hi,

I'm trying to install the OpenVZ kernel, however, I'm unable to and am getting this error message:

Quote:[root@909b4 ~]# yum search ovzkernel

Loaded plugins: fastestmirror, priorities, security

Loading mirror speeds from cached hostfile

* openvz-kernel-rhel6: mirror.steadfast.net

* openvz-utils: mirror.steadfast.net

* rpmforge: mirror.hmc.edu

148 packages excluded due to repository priority protections

Warning: No matches found for: ovzkernel

No Matches found

[root@909b4 ~]#

Any ideas what I can do to resolve that?

Thanks.

What's the version of CentOS you are using?

Newer you found at: yum search vzkernel
