vzctl restart 109

Warning: Unknown iptable module: ipt_MASQUERADE, skipped

Warning: Unknown iptable module: ipt_MASQUERADE, skipped

No idea why this has just suddenly started happening, using kernel:
2.6.18-308.el5.028stab099.3

Any ideas

New kernel probably doesn't have the module compiled in. Might have to modprobe it.

If you need it inside the VM, try putting the module in /etc/vz/vz.conf:

```
IPTABLES="ipt_REJECT ipt_REDIRECT ipt_tos ipt_limit ipt_multiport iptable_filter  
iptable_mangle ipt_TCPMSS ipt_tcpmss ipt_ttl ipt_length iptable_nat"
```

The module name should be ipt_MASQUERADE.
