
Subject: CONFIG_SCHED_VCPU & CONFIG_FAIRSCHEd missing...

Hi,

I'd like to try openvz, but I'm stuck with kernel compilation.

I followed http://wiki.openvz.org/Kernel_configuration and it says I should enable (apart from other things) these options:

```
CONFIG_SCHED_VCPU=y
```

```
CONFIG_FAIRSCHEd=y
```

Problem is, I can not find these two items in kernel-sources (2.6.32-openvz-049.6). I have run "make menuconfig" again and again, found all other options required by the above mentioned wiki-page, but these two are simply not there. I also checked ".config" file for these strings, nothing...

I'm used to compile software including kernel (running Gentoo), I have done it many times, but now I'm stuck. Can someone point me to the right directions?

Jarry

Hi,

CONFIG_SCHED_VCPU is obsolete.

CONFIG_FAIRSCHEd has been renamed in CONFIG_VZ_FAIRSCHEd
