Hello smart people,
http://i.imgur.com/XGxwn.jpg
Kernel bug or hardware problem? What do you think?
Thank you.

I'm not really that great at debugging kernel stuff but if I were, that image wouldn't really give me much to go on... so maybe the flip of a coin can answer your question.

TYL,

Subject: venet and several interfaces in one CT

Hi there,

I have a CT with three interfaces, external (8.0.0.1), local (
192.168.0.1) and internal (10.0.0.1). How can I configure routing in
this case to use 192.168.0.1 for subnet 192.168.0.0/24 , 10.0.0.1 for
10.0.0.0/24 and 8.0.0.1 for other?Now I use network mask for this but
I'm not sure this is a right way.

Just add IPs for all three networks to a CT (with proper masks) and you are
all set.
