Subject: OpenSuse 12.1 setup troubles
Posted by def1589 on Thu, 19 Jul 2012 12:22:46 GMT

Hello.
I'm trying to run OpenSuse 12.1
(template taken from download.openvz.org (suse-12.1-x86.tar.gz))
but it doesn't start:
Quote:Starting container ...
Container is mounted
Adding IP address(es): XX.XXX.XX.XX
Setting CPU limit: 0
Setting CPU units: 10000
Setting CPUs: 0
insserv: FATAL: service syslog has to be enabled to use service vzquota
insserv: exiting now!
/sbin/insserv failed, exit code 1

Note: This output shows SysV services only and does not include native
systemd services. SysV configuration data might be overridden by native
systemd configuration.

Node OS: CentOS 5.8, Kernel: 2.6.18

Any suggestions?
