
Subject: VM Creation issues. Seems like a quota problem just not sure where.

Having some troubles getting vm's to build on select servers. The servers that are having issues with this template are 2.6.32 vs 2.6.18 kernels. Under the 2.6.18 kernel this template builds just fine. With a 2.6.32 kernel I get the following:

```
2012-08-05T11:46:51-0400 vzctl : CT 1884 : Creating container private
area (centos-6-cpanel-default)
2012-08-05T11:50:10-0400 vzctl : CT 1884 : Creation of container private
area failed

```

ve-unlimited.conf-sample:

```
# Disk quota parameters (in form of softlimit:hardlimit)
DISKSPACE="250G:250G"
DISKINODES="200000000000:200000000000"
QUOTATIME="0"
DISK_QUOTA="yes"
ONBOOT=yes
```

```
uname - 2.6.32-042stab057.1
vzctl version 3.3
```

node is set for vswap

In comparison this template is rather large at 1.5G vs the normal couple hundred meg. But its a full build out of cPanel.

Any direction pointing to what might be causing this would be great. It wasn't until the 2.6.32 kernel that this started to happen.
