Subject: Ubuntu 12.04 template problem - apticron reports e2fsprogs and libss2 as upgradable

Hello,

since I've started using 12.04 template for creating my new VMs I'm having this problem:

apticron reports everyday that packages e2fsprogs and libss2 are currently pending an upgrade:

apticron report [Thu, 09 Aug 2012 19:11:08 +0200]
==

apticron has detected that some packages need upgrading on:

    yyyyy.xxx
    [127.0.0.2 172.x.x.x 172.x.x.x]

The following packages are currently pending an upgrade:

    [b]e2fsprogs 1.42-1ubuntu2
    libss2 1.42-1ubuntu2[/b]

==

Package Details:

Reading changelogs...
apt-listchanges: didn't find any valid .deb archives

But those packages are not installed ...

Then I relized that apticron reports data which are passed from 'apt-get dist-upgrade' command, so I've run (output is in czech so I'll translated some parts):

 # apt-get -s dist-upgrade

Following NEW packages will be installed:
  e2fsprogs libss2

Inst libss2 (1.42-1ubuntu2 Ubuntu:12.04/precise [i386])

Conf libss2 (1.42-1ubuntu2 Ubuntu:12.04/precise [i386])
Inst e2fsprogs (1.42-1ubuntu2 Ubuntu:12.04/precise [i386])
Conf e2fsprogs (1.42-1ubuntu2 Ubuntu:12.04/precise [i386])

I guess installing those packages according to nature of OpenVZ is not wise.

Have anyone experienced this before? Do you have idea how to fix this (apt-get --ignore-hold dist-upgrade?) ?

Thank you for any reply.

First you need to hold that packages by:
apt-mark hold e2fsprogs && apt-mark hold libss2

Then you ned to modificate /usr/sbin/apticron, find

PKGNAMES=`/usr/bin/apt-get -q -y --allow-unauthenticated -s dist-upgrade | \
     /bin/grep ^Inst | /usr/bin/cut -d\ -f2 | /usr/bin/sort`

and

if [-n "$PKGNAMES"] ; then

     # do the upgrade downloads
     /usr/bin/apt-get -qq -d --allow-unauthenticated --force-yes dist-upgrade > /dev/null

 (

and remove --ignore-hold from that.

I know its not best solution, but worked for me.
