Can anyone assist with this error? What's going on here?

```
[root@dj2guh]# yum upgrade
Loaded plugins: fastestmirror, security
Loading mirror speeds from cached hostfile
 * base: mirror.krystal.co.uk
 * extras: mirror.krystal.co.uk
 * openvz-kernel-rhel6: mirror.steadfast.net
 * openvz-utils: mirror.steadfast.net
 * soluslabs: mirror.us1.soluslabs.net
 * updates: mirror.krystal.co.uk
Setting up Upgrade Process
Resolving Dependencies

Did you ever solve this issue? I've got the same problem...

A quick search would probably yield this:

<http://wiki.openvz.org/vzkernel-firmware>

BTW, welcome to the forum

From bash:

Quote:[root@n2 ~]# rpm -e vzkernel-firmware
error: package vzkernel-firmware is not installed

From /etc/yum.repos.d/openvz.repo

Quote:[openvz-kernel-rhel6]
name=OpenVZ RHEL6-based kernel
#baseurl=http : //download.openvz.org/kernel/branches/rhel6-2.6.32/current/
mirrorlist=http : //download.openvz.org/kernel/mirrors-rhel6-2.6.32
enabled=1
gpgcheck=1
gpgkey=http : //download.openvz.org/RPM-GPG-Key-OpenVZ
exclude=vzkernel-firmware

* Added spaces after "http" because I don't have 10 messages yet.

Still, when trying to update:

Quote:Error: ploop-lib conflicts with vzkernel

You could try using --skip-broken to work around the problem

** Found 4 pre-existing rpmdb problem(s), 'yum check' output follows:

kernel-2.6.32-279.el6.x86_64 has missing requires of kernel-firmware >= ('0', '2.6.32', '279.el6')
kernel-2.6.32-279.5.2.el6.x86_64 has missing requires of kernel-firmware >= ('0', '2.6.32', '279.5.2.el6')
vzkernel-2.6.32-042stab059.7.x86_64 has missing requires of kernel-firmware >= ('0', '2.6.32', '279.1.1.el6')
vzkernel-2.6.32-042stab061.2.x86_64 has missing requires of kernel-firmware >= ('0', '2.6.32', '279.5.1.el6')

Any idea of how to fix this?

Thanks!

LATER EDIT: solved by removing older vzkernels.
