Hi Guys,

Is it possilbe we can modprobe specific modules for different containers during the installation?

For example, for a module nf_nat_ftp. may I only want it to be configured in a container, not for the whole hardware note.

I saw there was some premount action in vzctl. Can it do this? Or some other proper way.

Thanks in advance.

Yang

Hi,

please check man page of vzctl, esp. Section "iptables control parameters".

Bye,
Thorsten
