
Subject: swap unlimited on the CT?

Hi,

I am struggling to setup a container with unlimited parameters, including the swap.

I put in my config:

```
PHYSPAGES="unlimited"  
SWAPPAGES="unlimited"
```

But the swap stays at zero.

Any idea how to have all the swap of the HN on the CT, if possible by not calculating the amount by hand?

Best,

Ok found the solution, apparently, commenting SWAPPAGES or removing it from the config makes the CT to have access to the whole swap of the HN.

Which is different from setting it to "unlimited". Strange, but it works...

I wonder if that's a bug or the intended behavior. It doesn't sound consistent with using 'unlimited' like other attributes. I would be worried if this were a bug that gets fixed later on before you have a chance to configure your CTs appropriately and then they start acting not as intended per your requirements.

Strange indeed. Can you please revert back to config when it was not working as expected, restart CT and then provide the following:

- cat /etc/vz/conf/\$CTID.conf
- cat /proc/bc/\$CTID/resources
- uname -a
- vzctl --version

Here it is with 16G hardcoded, I would like to have it floating so
that I do not have to template it for all the hosts:

```
=====
$ cat /etc/vz/conf/$CTID.conf
# UBC parameters (in form of barrier:limit)
# Primary parameters
AVNUMPROC="unlimited"
NUMPROC="unlimited"
