## Subject: IO accounting auxiliary info on RHEL6 kernel Posted by Bryon on Thu, 11 Oct 2012 18:04:48 GMT

View Forum Message <> Reply to Message

Hi,

I'm searching for IO accounting information per container via the /proc/bc/\$VEID/ioacct entry.

The IO Accounting wiki page states some auxiliary information, such as sync, read, and write counts are included within the IO activity – however I am not seeing this auxiliary information at all on any RHEL6 kernels.

Has the aux. info. been not included or removed past RHEL5? Is there any way to access this info as described in the current RHEL6 testing/stable kernels?

Regards,

Bryon
