We are experiencing very high CPU usage on our server.

It is Xeon 5520 with 24GB of RAM.

The cause of this is the process kstopmachine.

Here is a list of processes from htop:

PID CPU COMMAND-LINE

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

? 100% kstopmachine

Can someone help us with this.

We have already made FSCK and set another kernel.

uname -a is:

Linux hostname 2.6.18-308.8.2.el5.028stab101.1 #1 SMP Sun Jun 24 20:25:35 MSD 2012

x86_64 x86_64 x86_64 GNU/Linux

Any advice would be great.

Thank you.
