
Subject: [PATCH v3 00/12] fuse: optimize scatter-gather direct IO

Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:47:45 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi,

Existing fuse implementation processes scatter-gather direct IO in suboptimal way: fuse_direct_IO passes iovec[] to fuse_loop_dio and the latter calls fuse_direct_read/write for each iovec from iovec[] array. Thus we have as many submitted fuse-requests as the number of elements in iovec[] array. This is pure waste of resources and affects performance negatively especially for the case of many small chunks (e.g. page-size) packed in one iovec[] array.

The patch-set amends situation in a natural way: let's simply pack as many iovec[] segments to every fuse-request as possible.

To estimate performance improvement I used slightly modified fusexmp over tmpfs (clearing O_DIRECT bit from fi->flags in xmp_open). The test opened a file with O_DIRECT, then called readv/writev in a loop. An iovec[] for readv/writev consisted of 32 segments of 4K each. The throughput on some commodity (rather feeble) server was (in MB/sec):

	original	/	patched
writev:	~107	/	~480
readv:	~114	/	~569

We're exploring possibility to use fuse for our own distributed storage implementation and big iovec[] arrays of many page-size chunks is typical use-case for device virtualization thread performing i/o on behalf of virtual-machine it serves.

Changed in v2:

- inline array of page pointers req->pages[] is replaced with dynamically allocated one; the number of elements is calculated a bit more intelligently than being equal to FUSE_MAX_PAGES_PER_REQ; this is done for the sake of memory economy.
- a dynamically allocated array of so-called 'page descriptors' - an offset in page plus the length of fragment - is added to fuse_req; this is done to simplify processing fuse requests covering several iov-s.

Changed in v3:

- used iov_iter in fuse_get_user_pages() and __fuse_direct_io()
- zeroed req->pages[] array on allocation
- a bunch of minor cleanup changes:
 - used unsigned for npages
 - freed req->pages[] and req->page_descs[] together
 - renamed fuse_get_ua() to fuse_get_user_addr()
 - renamed fuse_get_fr_sz() to fuse_get_user_size()

- simplified loop in fuse_page_descs_length_init()
- rebased on v3.7-rc2

Thanks,
Maxim

Subject: [PATCH 01/12] fuse: general infrastructure for pages[] of variable size
Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:48:07 GMT

[View Forum Message](#) <> [Reply to Message](#)

The patch removes inline array of FUSE_MAX_PAGES_PER_REQ page pointers from fuse_req. Instead of that, req->pages may now point either to small inline array or to an array allocated dynamically.

This essentially means that all callers of fuse_request_alloc[_nofs] should pass the number of pages needed explicitly.

The patch doesn't make any logic changes.

Subject: [PATCH 02/12] fuse: categorize fuse_get_req()
Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:48:30 GMT
[View Forum Message](#) <> [Reply to Message](#)

The patch categorizes all fuse_get_req() invocations into two categories:
- fuse_get_req_nopages(fc) - when caller doesn't care about req->pages
- fuse_get_req(fc, n) - when caller need n page pointers (n > 0)

Adding fuse_get_req_nopages() helps to avoid numerous fuse_get_req(fc, 0) scattered over code. Now it's clear from the first glance when a caller need fuse_req with page pointers.

The patch doesn't make any logic changes. In multi-page case, it silly allocates array of FUSE_MAX_PAGES_PER_REQ page pointers. This will be amended by future patches.

Subject: [PATCH 03/12] fuse: rework fuse_retrieve()
 Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:48:42 GMT
[View Forum Message](#) <> [Reply to Message](#)

The patch reworks fuse_retrieve() to allocate only so many page pointers as needed. The core part of the patch is the following calculation:

```
num_pages = (num + offset + PAGE_SIZE - 1) >> PAGE_SHIFT;
```

(thanks Miklos for formula). All other changes are mostly shuffling lines.

Subject: [PATCH 04/12] fuse: rework fuse_readpages()
 Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:48:51 GMT
[View Forum Message](#) <> [Reply to Message](#)

The patch uses 'nr_pages' argument of fuse_readpages() as heuristics for the number of page pointers to allocate.

This can be improved further by taking in consideration fc->max_read and gaps between page indices, but it's not clear whether it's worthy or not.

Subject: [PATCH 05/12] fuse: rework fuse_perform_write()
 Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:49:00 GMT
[View Forum Message](#) <> [Reply to Message](#)

The patch allocates as many page pointers in fuse_req as needed to cover interval [pos .. pos+len-1]. Inline helper fuse_wr_pages() is introduced to hide this cumbersome arithmetic.

Subject: [PATCH 06/12] fuse: rework fuse_do_ioctl()
 Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:49:13 GMT
[View Forum Message](#) <> [Reply to Message](#)

fuse_do_ioctl() already calculates the number of pages it's going to use. It is stored in 'num_pages' variable. So the patch simply uses it for allocating fuse_req.

Subject: [PATCH 07/12] fuse: add per-page descriptor <offset, length> to fuse_req

Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:49:24 GMT

[View Forum Message](#) <> [Reply to Message](#)

The ability to save page pointers along with lengths and offsets in fuse_req will be useful to cover several iovec-s with a single fuse_req.

Per-request page_offset is removed because anybody who need it can use req->page_descs[0].offset instead.

Subject: [PATCH 08/12] fuse: use req->page_descs[] for argpages cases
Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:49:33 GMT

[View Forum Message](#) <> [Reply to Message](#)

Previously, anyone who set flag 'argpages' only filled req->pages[] and set per-request page_offset. This patch re-works all cases where argpages=1 to fill req->page_descs[] properly.

Having req->page_descs[] filled properly allows to re-work fuse_copy_pages() to copy page fragments described by req->page_descs[]. This will be useful for next patches optimizing direct_IO.

Subject: [PATCH 09/12] mm: minor cleanup of iov_iter_single_seg_count()
Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:50:04 GMT
[View Forum Message](#) <> [Reply to Message](#)

The function does not modify iov_iter which 'i' points to.

Subject: [PATCH 10/12] fuse: pass iov[] to fuse_get_user_pages()
 Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:50:15 GMT
[View Forum Message](#) <> [Reply to Message](#)

The patch makes preliminary work for the next patch optimizing scatter-gather direct IO. The idea is to allow fuse_get_user_pages() to pack as many iov-s to each fuse request as possible. So, here we only rework all related call-paths to carry iov[] from fuse_direct_IO() to fuse_get_user_pages().

Subject: [PATCH 11/12] fuse: optimize fuse_get_user_pages()

Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:50:29 GMT

[View Forum Message](#) <> [Reply to Message](#)

Let fuse_get_user_pages() pack as many iov-s to a single fuse_req as possible. This is very beneficial in case of iov[] consisting of many iov-s of relatively small sizes (e.g. PAGE_SIZE).

Subject: [PATCH 12/12] fuse: optimize __fuse_direct_io()
 Posted by [Maxim Patlasov](#) on Fri, 26 Oct 2012 15:50:36 GMT
[View Forum Message](#) <> [Reply to Message](#)

__fuse_direct_io() allocates fuse-requests by calling fuse_get_req(fc, n). The patch calculates 'n' based on iov[] array. This is useful because allocating FUSE_MAX_PAGES_PER_REQ page pointers and descriptors for each fuse request would be waste of memory in case of iov-s of smaller size.
