I mounted a directory as suggested in:

[wiki.openvz.org/Bind\\_mounts](http://wiki.openvz.org/Bind_mounts)

When I unmounted it the physical server hung, syslog:

myhost kernel: [6828826.156186] BUG: soft lockup - CPU#10 stuck for 66s! [umount:884904]

Is there a safe way to unmount?

vz kernel: 042stab061\_2  
2.6.32-042stab061.2 (Centos 64)

Thanks
