---

the openVZ is installed in a vmware with centos 6.3 the Ve work fine, but this not see out from the server

the main pc is 192.168.1.71  
the vmware server Ip is 192.168.1.72

a ping from x.x.x.71 to x.x.x.72 is ok

the VE in server is 192.168.1.91

if make ping from x.x.x.191 to x.x.x.72 is succesful but not see the x.x.x.71 this show

From 192.168.1.71 icmp\_seq=3 Destination Host Prohibited

and the same from x.x.x.71 to x.x.x.191

PLEASE HELP

How is your networking done? Default? I use iptables masquerading for it and have to run the following commands before the CTs see the internet:

```
echo 1 > /proc/sys/net/ipv4/ip_forward  
iptables -t nat -A POSTROUTING -o eth0 -j MASQUERADE
```
