---

Hello,

i am running hyperVM on a Centos 5.8 box, x86 (kernel 2.6.18-308.8.2.el5.028stab101.1PAE).

I am using only openVZ for virtualization and i have a problem with OS templates: although the /vz/templates/cache has all the OS tarbals i need (centos-5-x86.tar.gz centos-6-x86.tar.gz debian-6.0-x86.tar.gz fedora-14-x86.tar.gz robots.txt suse-11.1-x86.tar.gz ubuntu-11.04-x86.tar.gz), the list available for customers doesn't show anything, it's empty.

Anyone knows how to deal with missing OS Template list?

Thanks.

You should contact the creators of the software you're using. AFAIK, hypervm used to have active forums, etc.
