---

hello

i have restart my main server from DC

i have setup SolusVM and i have creat 8 VPS (s) OpenVZ

after reboot all vps online

Except one get offline

i have try to make shutdown to it and Boot , reboot , suspend , unsuspend , wait after boot for long time

all get it Offline and no change

i have reboot my main server again and still this vps offline while it was working fine

i have contact Solusvm they said that i should contact Openvz

can you plz help me as quick
