Hi,

All of a sudden i notice all the containers and kvm machines are stopped. I started kvm machines and running successfully. when i am trying to start container i getting error "Invalid kernel, or some kernel modules are not loaded". Still all the containers are stopped.

```
root@test:~# vzctl start 101
```

```
Starting container ...
```

```
Container is mounted
```

```
Invalid kernel, or some kernel modules are not loaded
```

```
Container start failed (try to check kernel messages, e.g. "dmesg | tail")
```

```
Container is unmounted
```

```
root@test:~# dmesg | tail
```

```
tap111i0d0: no IPv6 routers present
```

```
tap119i0d0: no IPv6 routers present
```

```
tap134i0d0: no IPv6 routers present
```

```
vmbr0: port 3(tap108i0d0) entering disabled state
```

```
vmbr0: port 3(tap108i0d0) entering disabled state
```

```
device tap108i0d0 entered promiscuous mode
```

```
vmbr0: port 3(tap108i0d0) entering forwarding state
```

```
tap108i0d0: no IPv6 routers present
```

```
vmbr0: port 7(tap134i0d0) entering disabled state
```

```
vmbr0: port 7(tap134i0d0) entering disabled state
```

Attached is my log of dmesg.

Will be great if some could respond quickly.

Thanks

Swaroop.
