Hi!

This one is weird...

When I run:

vzyum 101 install yum

I get:

ERROR: No such OS template: install

*What's that about?

Fixed it. Metadata was missing (I was using 64bit version and had installed metadata for 32bit).

I have exactly the same problem, where did you find the metadata for a 64 bit system? I'm using the precreated CentOS minimal, but vzyum fails with this error, I suppose it is the problem you had:

ERROR: No such OS template: install

Thanks!

Fernando
