Subject: ID Problem running vzdump

I've a problem with the ID's of my vps.

(i've read it that they should be higher than 100) And i guess that's the problem for the following situation:

```
 vzdump --compress --dumpdir /work/backup_vps/ --suspend 25
ERROR: strange VPS ID '25'
```

My questions are: There is other way to full backup or create image of my vps? or There is a simple way to renumber id's?

I need some help on this.

Thanks
