How should I correct this? I believe I have everything necessary installed, rpm-python etc....

Quote:

```
[root@vps-1 ~]# vzyum 103 install yum
exec /usr/share/vzyum/bin/yum -c /vz/template/centos/4/i386/config/yum.conf --installroot
/vz/root/103 --vps=103 install yum
```

There was a problem importing one of the Python modules required to run yum. The error leading to this problem was:

```
/usr/share/vzpkgtools/vzrpm43/lib/python2.3/site-packages/rp mmodule.so: cannot open shared
object file: No such file or directory
```

Please install a package which provides this module, or verify that the module is installed correctly.

It's possible that the above module doesn't match the current version of Python, which is:

2.3.4 (#1, Mar 13 2006, 07:49:07)

[GCC 3.4.4 20050721 (Red Hat 3.4.4-2)]
