Subject: Can't stop container with the latest v4.2 vzctl version
Posted by Patschi on Sat, 23 Mar 2013 22:32:33 GMT

Hello OpenVZ community,

Always when I'm trying to stop any container on my system with
Quote:vzctl stop 101
the command is loading and loading and won't end. While the command is waiting for the end of the container, the container was already shutdown in the background. The older version 3.2 from the debian repository works fine, but just not the latest 4.2 version.

Thanks for any help.

I'm having the same problem....

server01:~# vzctl stop 1007
Stopping container ...

Nothings happens from here on...

I want to add that I have only the problem with the kernel in the official APT: 2.6.32. With the OpenVZ kernel it works without any problems.
