I am running whith 2.6.9-023stab016.2 in centos 4.4 for the HN
i have configured 3 vps.

- 1 - debian 3.1 with apache2 and php4 ip:192.168.0.200
- 2 - fedora core 4 with mysql-server ip: 192.168.0.201
- 3 - debian 3.1 with lighttpd (proxy-web) ip: 192.168.0.252

the ip of HN is : 192.168.0.253

the communication between the vps are very slow, for mysql request for exemple or simply to connect ssh between HN and vps.
please help me!

Excuse-me for my english, but im french.

Can you specify, please, how did you measure the speed of connection? In other words why do you think the speed is low?
More information you'll give - more help we'll be able to provide.

Thanks!
