Is it possible to have sound in more then one vps?
I have sound working in one vps. It would be great if i could access the soundcard from another vps at the same time.

Can somebody tell me if and how to do this?

I tried to set same devnodes settings on 2 containers at the same time this does not work. The vps that starts first has access to the soundcard the other one has no sound till i remove the devnodes settings in the first one then it works but never 2 container at the same time. Is there a way to make it work in more then one container?

I searched the forum to find an answer for this didn't found any posts about it.
